SALES TEAM RESOURCE SATISFACTION

The Video & PDF Repository redesign solved content discoverability challenges, driving a 691% increase in video engagement and maximizing ROI on existing content production investment for sales teams.

OBJECTIVES

Transform video content utilization by solving the discoverability problem rather than creating more content, acting as product owner to redesign the platform and maximize ROI on existing production investment.

Challenges

- Sales teams requesting more video despite low engagement with existing content
- Poor content discoverability creating perception of under-resourcing
- Wasted production investment on unused video assets
- Inadequate navigation and tagging system

Benefits

- 691% increase in video views in post-launch quarter
- 57% increase in PDF downloads in post-launch quarter
- Maximized ROI on content production
- Improved sales team resource satisfaction

SOLUTIONS

User Research & Diagnosis
Conducted analysis revealing the core issue was content navigation and discoverability, not insufficient content volume or production quality.

Product Ownership
Acted as product owner for new video/PDF repository, defining requirements, prioritizing features, and coordinating full platform overhaul across teams.

Cross-Functional Coordination
Partnered with Engineering, UX, Web Development, and Content Managers to redesign the discovery experience from the ground up.

Strategic Advocacy
Successfully advocated for building a new tagging system when Engineering proposed reusing inadequate legacy infrastructure, prioritizing user needs.

BENEFITS

Dramatic Engagement Growth
691% increase in video views in first quarter post-launch demonstrated that strategic UX could transform content utilization without creating new assets.

Broader Content Adoption
57% increase in PDF downloads showed improved platform drove adoption across all content types, not just video resources.

Resource Satisfaction
Sales teams reported improved satisfaction with available resources, closing perception gap between actual tools and perceived needs.

Production ROI
Maximized return on existing content production investment by ensuring created materials were actually discovered and used by sales teams.
